

## Recipe for "Magic Tick-Fighting Dust"

(With thanks to [www.PrimallyInspired.com](http://www.PrimallyInspired.com))

1 cup FOOD GRADE Diatomaceous Earth or DE  
1/2 cup Neem Powder  
1/2 cup Yarrow Powder  
20 Drops Eucalyptus Essential Oil

Mix everything together and put in a shaker jar. To use it dry on your lawn (with a powder applicator or a simple shaker jar), you'll need about 1 pound per 500 square feet of lawn. You can also mix it up as a paste and apply it with a hose-end sprayer, using 2 tablespoons per gallon of water. Reapply at least once a month for best results.

*A glass shaker jar, or mason jar, is perfect for the powder.*

**The ingredients** for "Magic Tick-Fighting Dust" are available online from Amazon and other online retailers, or in health food stores and many drugstores.

**Food Grade Diatomaceous Earth or DE.** This is made from sedimentary mineral rock and contains the important trace metal called silica. Be sure to pick FOOD GRADE, not the DE that's for pool filters.

**Neem Powder** is ground from the bark, seeds, leaves and flowers of the Neem Tree. It has been used for centuries as a general cure-all in Indian medicine.

**Yarrow Powder** is made from the common weed yarrow, native to most of the Northern Hemisphere. It is used as a herbal treatment for fever, cough, the common cold, diarrhea, skin allergies and more. It's often an ingredient in natural and organic shampoos.

**Eucalyptus Essential Oil** is offered at most health food stores. It's thought to be stimulating, healing and regenerating, and it repels pests. This is the same Eucalyptus Oil used in aromatherapy. (Look for pure or organic versions.)
